

COLLEGE OF CHARLESTON

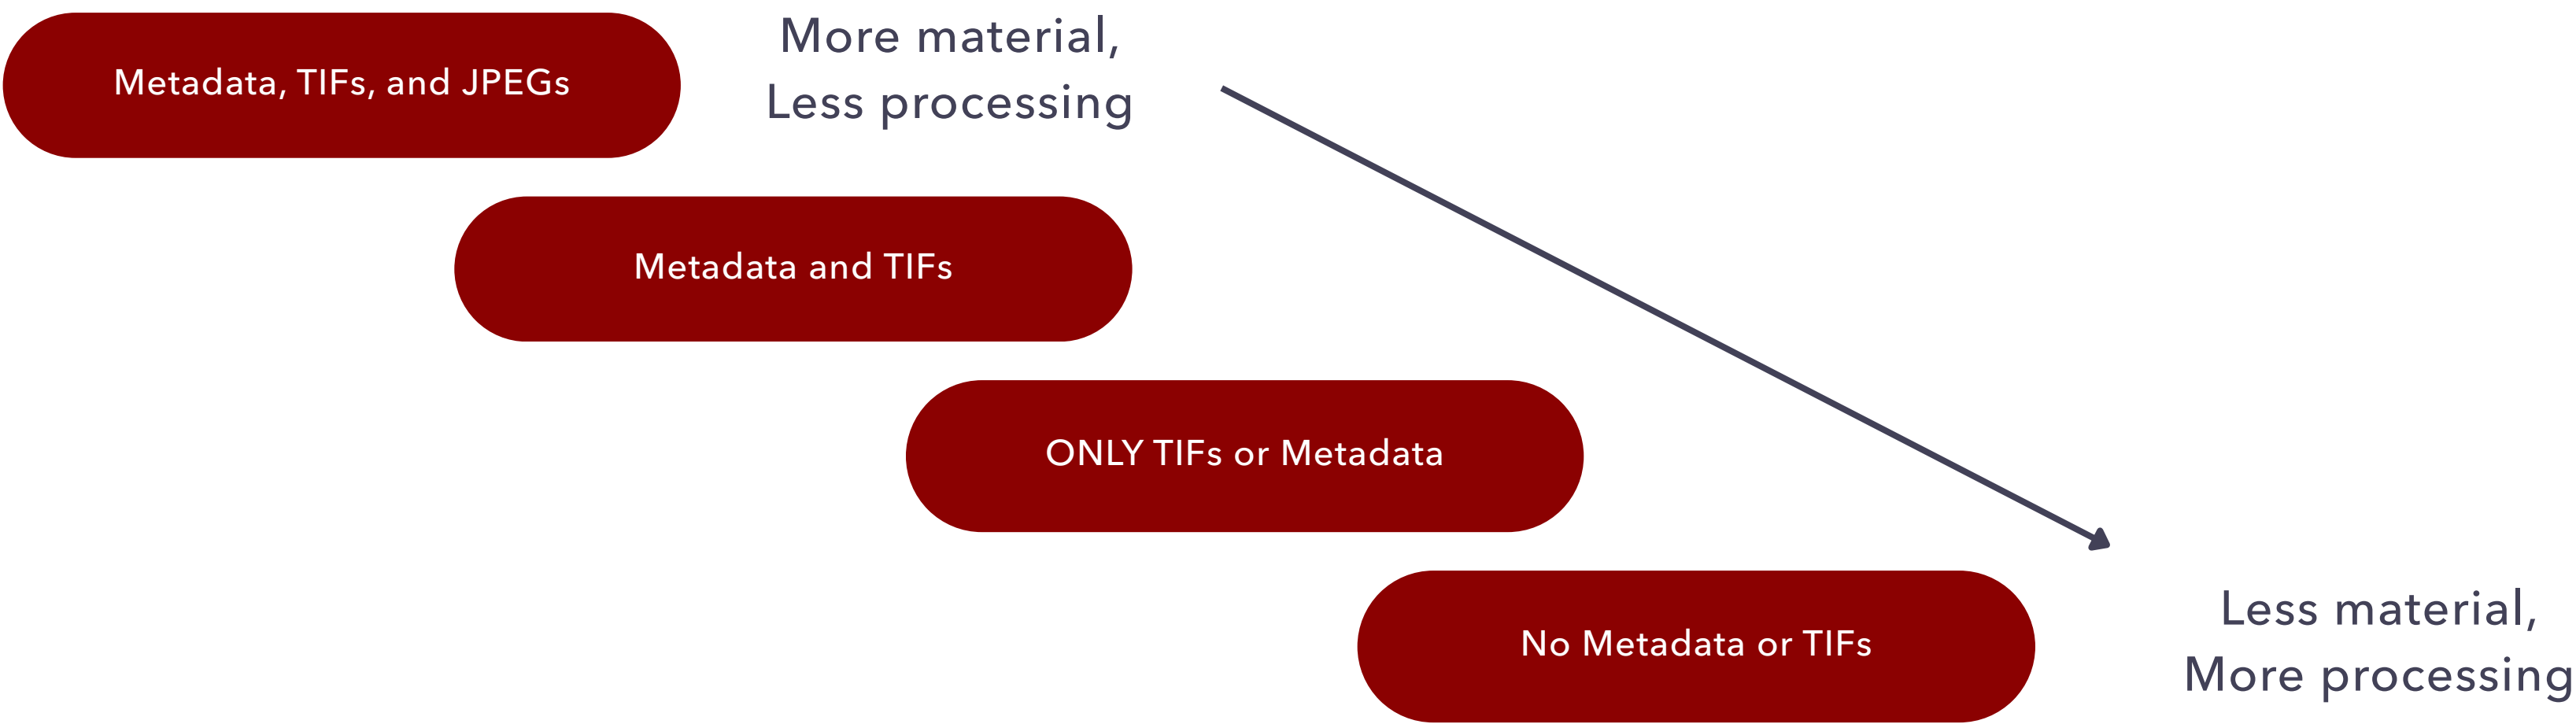

BEYOND THE BLACK BOX: DIGITAL LIBRARY WORKFLOWS BEHIND THE LOWCOUNTRY DIGITAL LIBRARY

Ezra Wingard, Digital Library Analyst

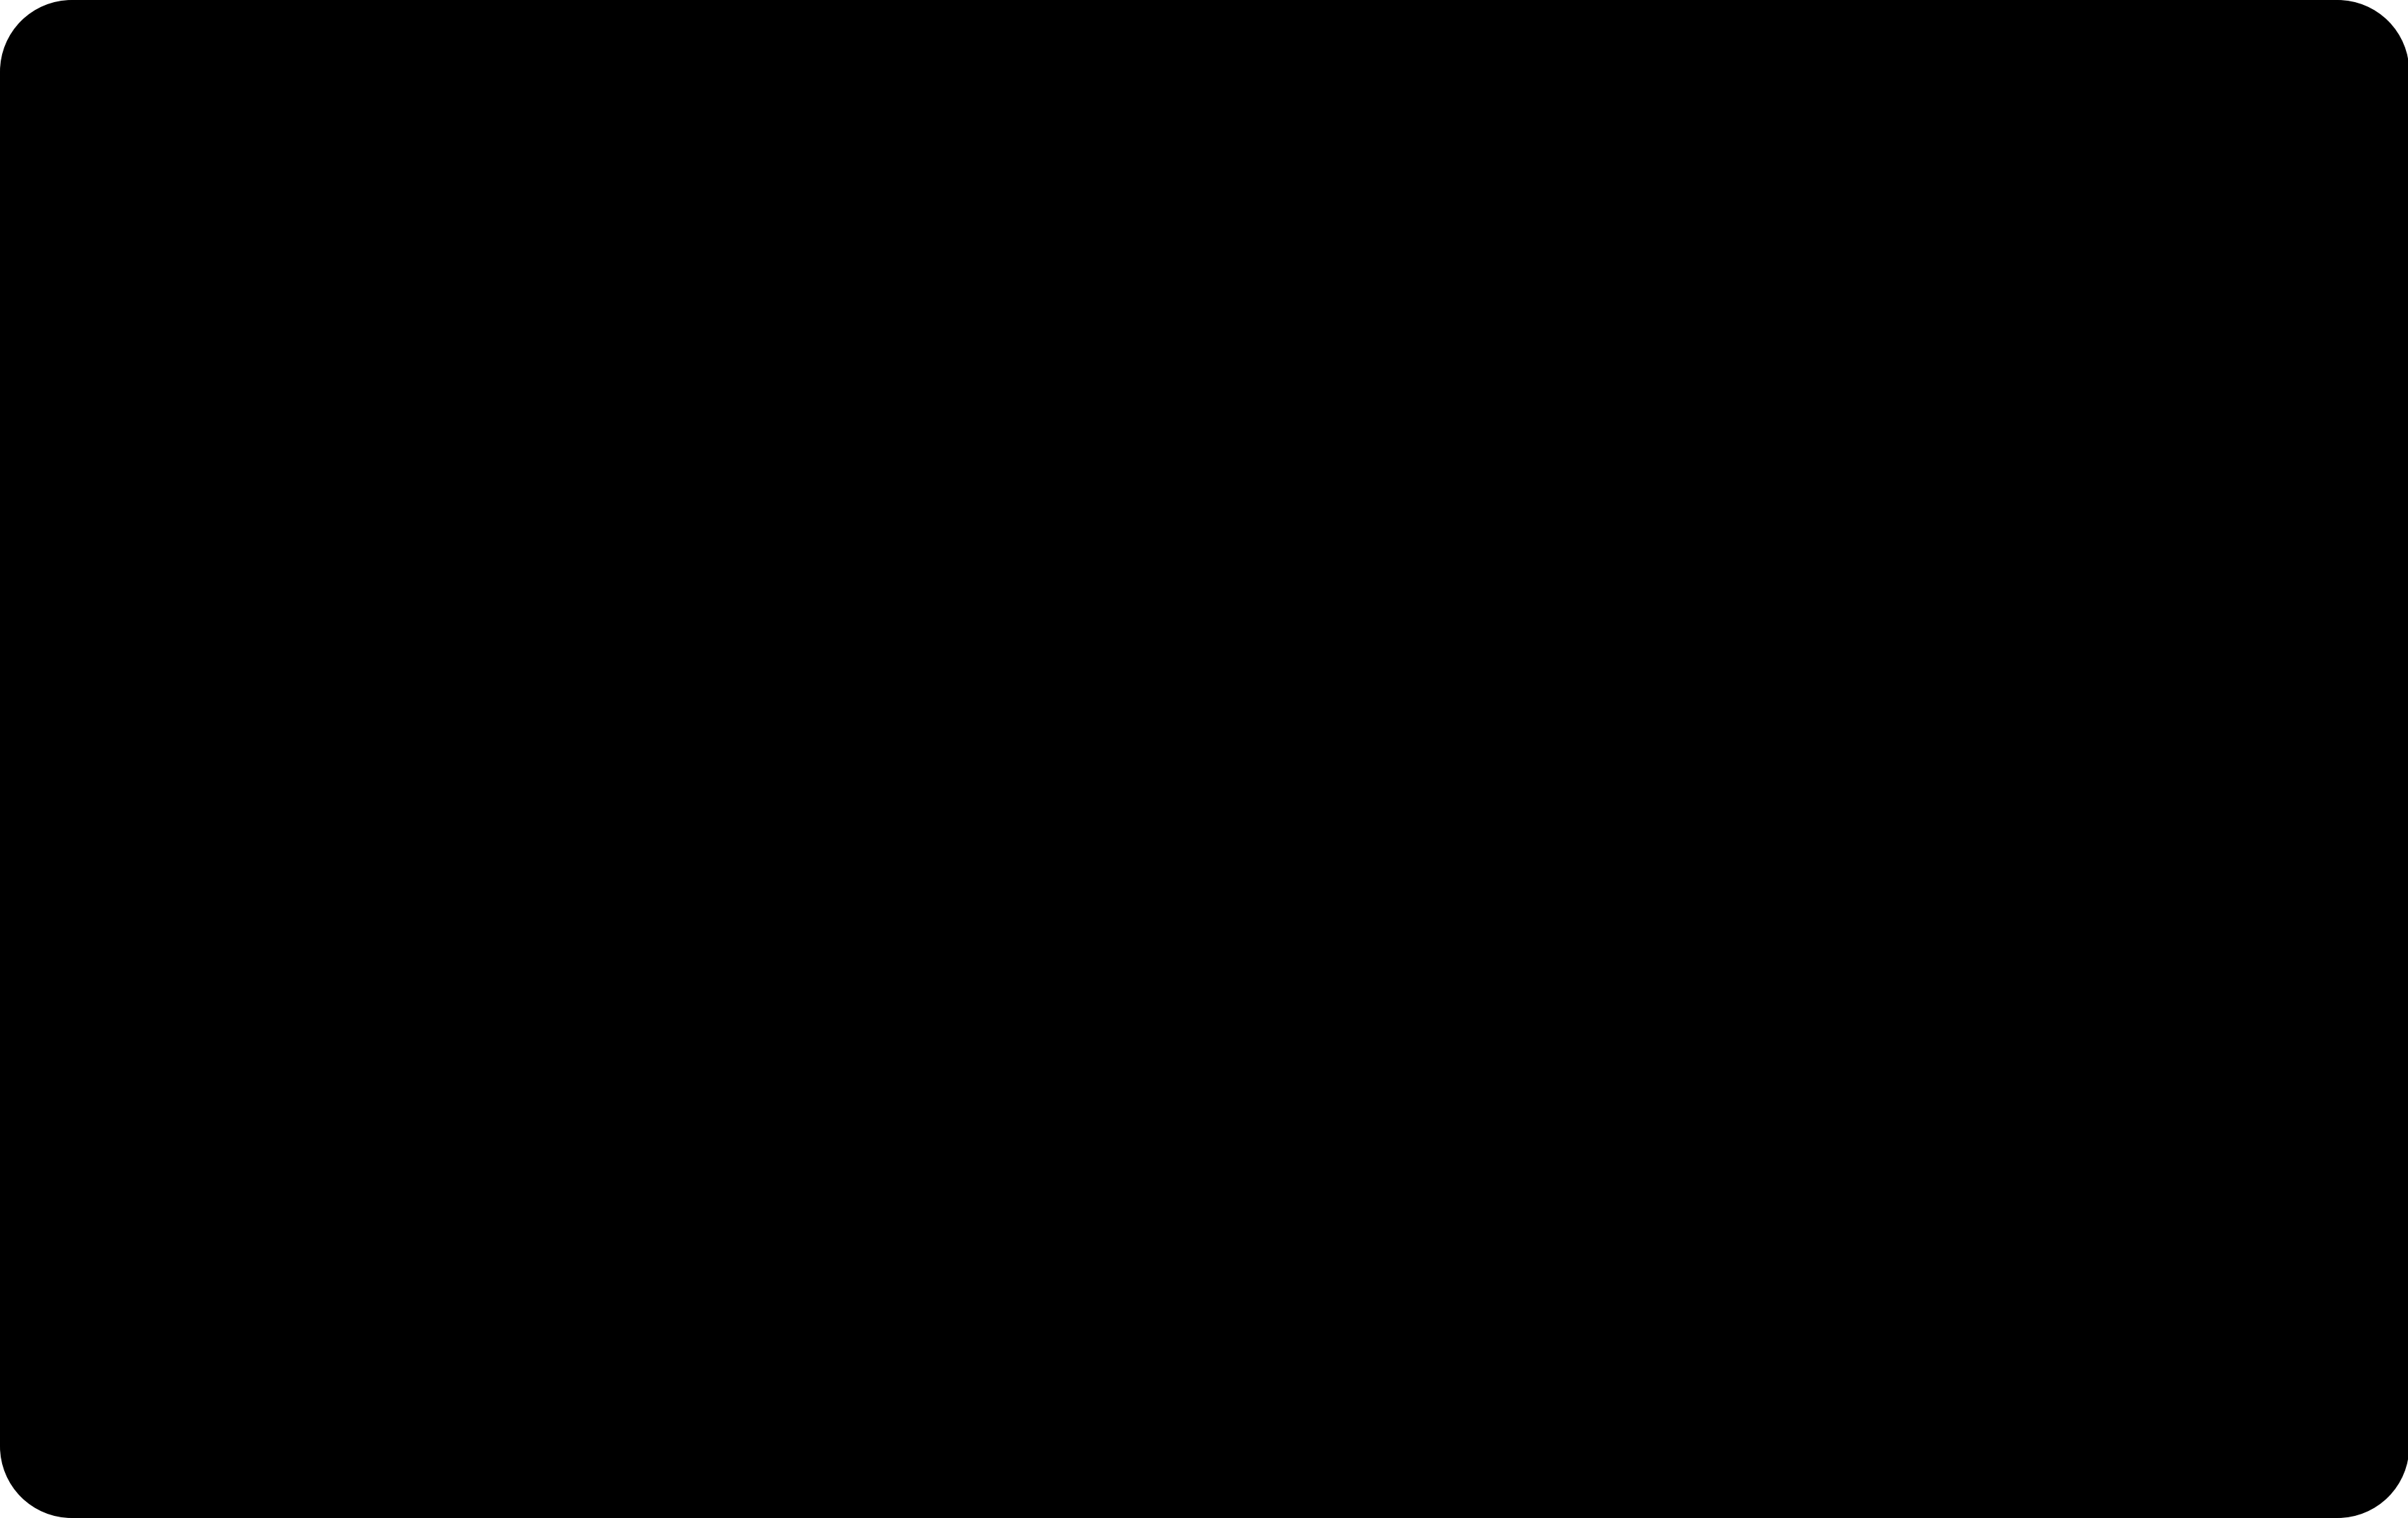

THE “LIBRARY”

Digitization. Description. Publication. Preservation.

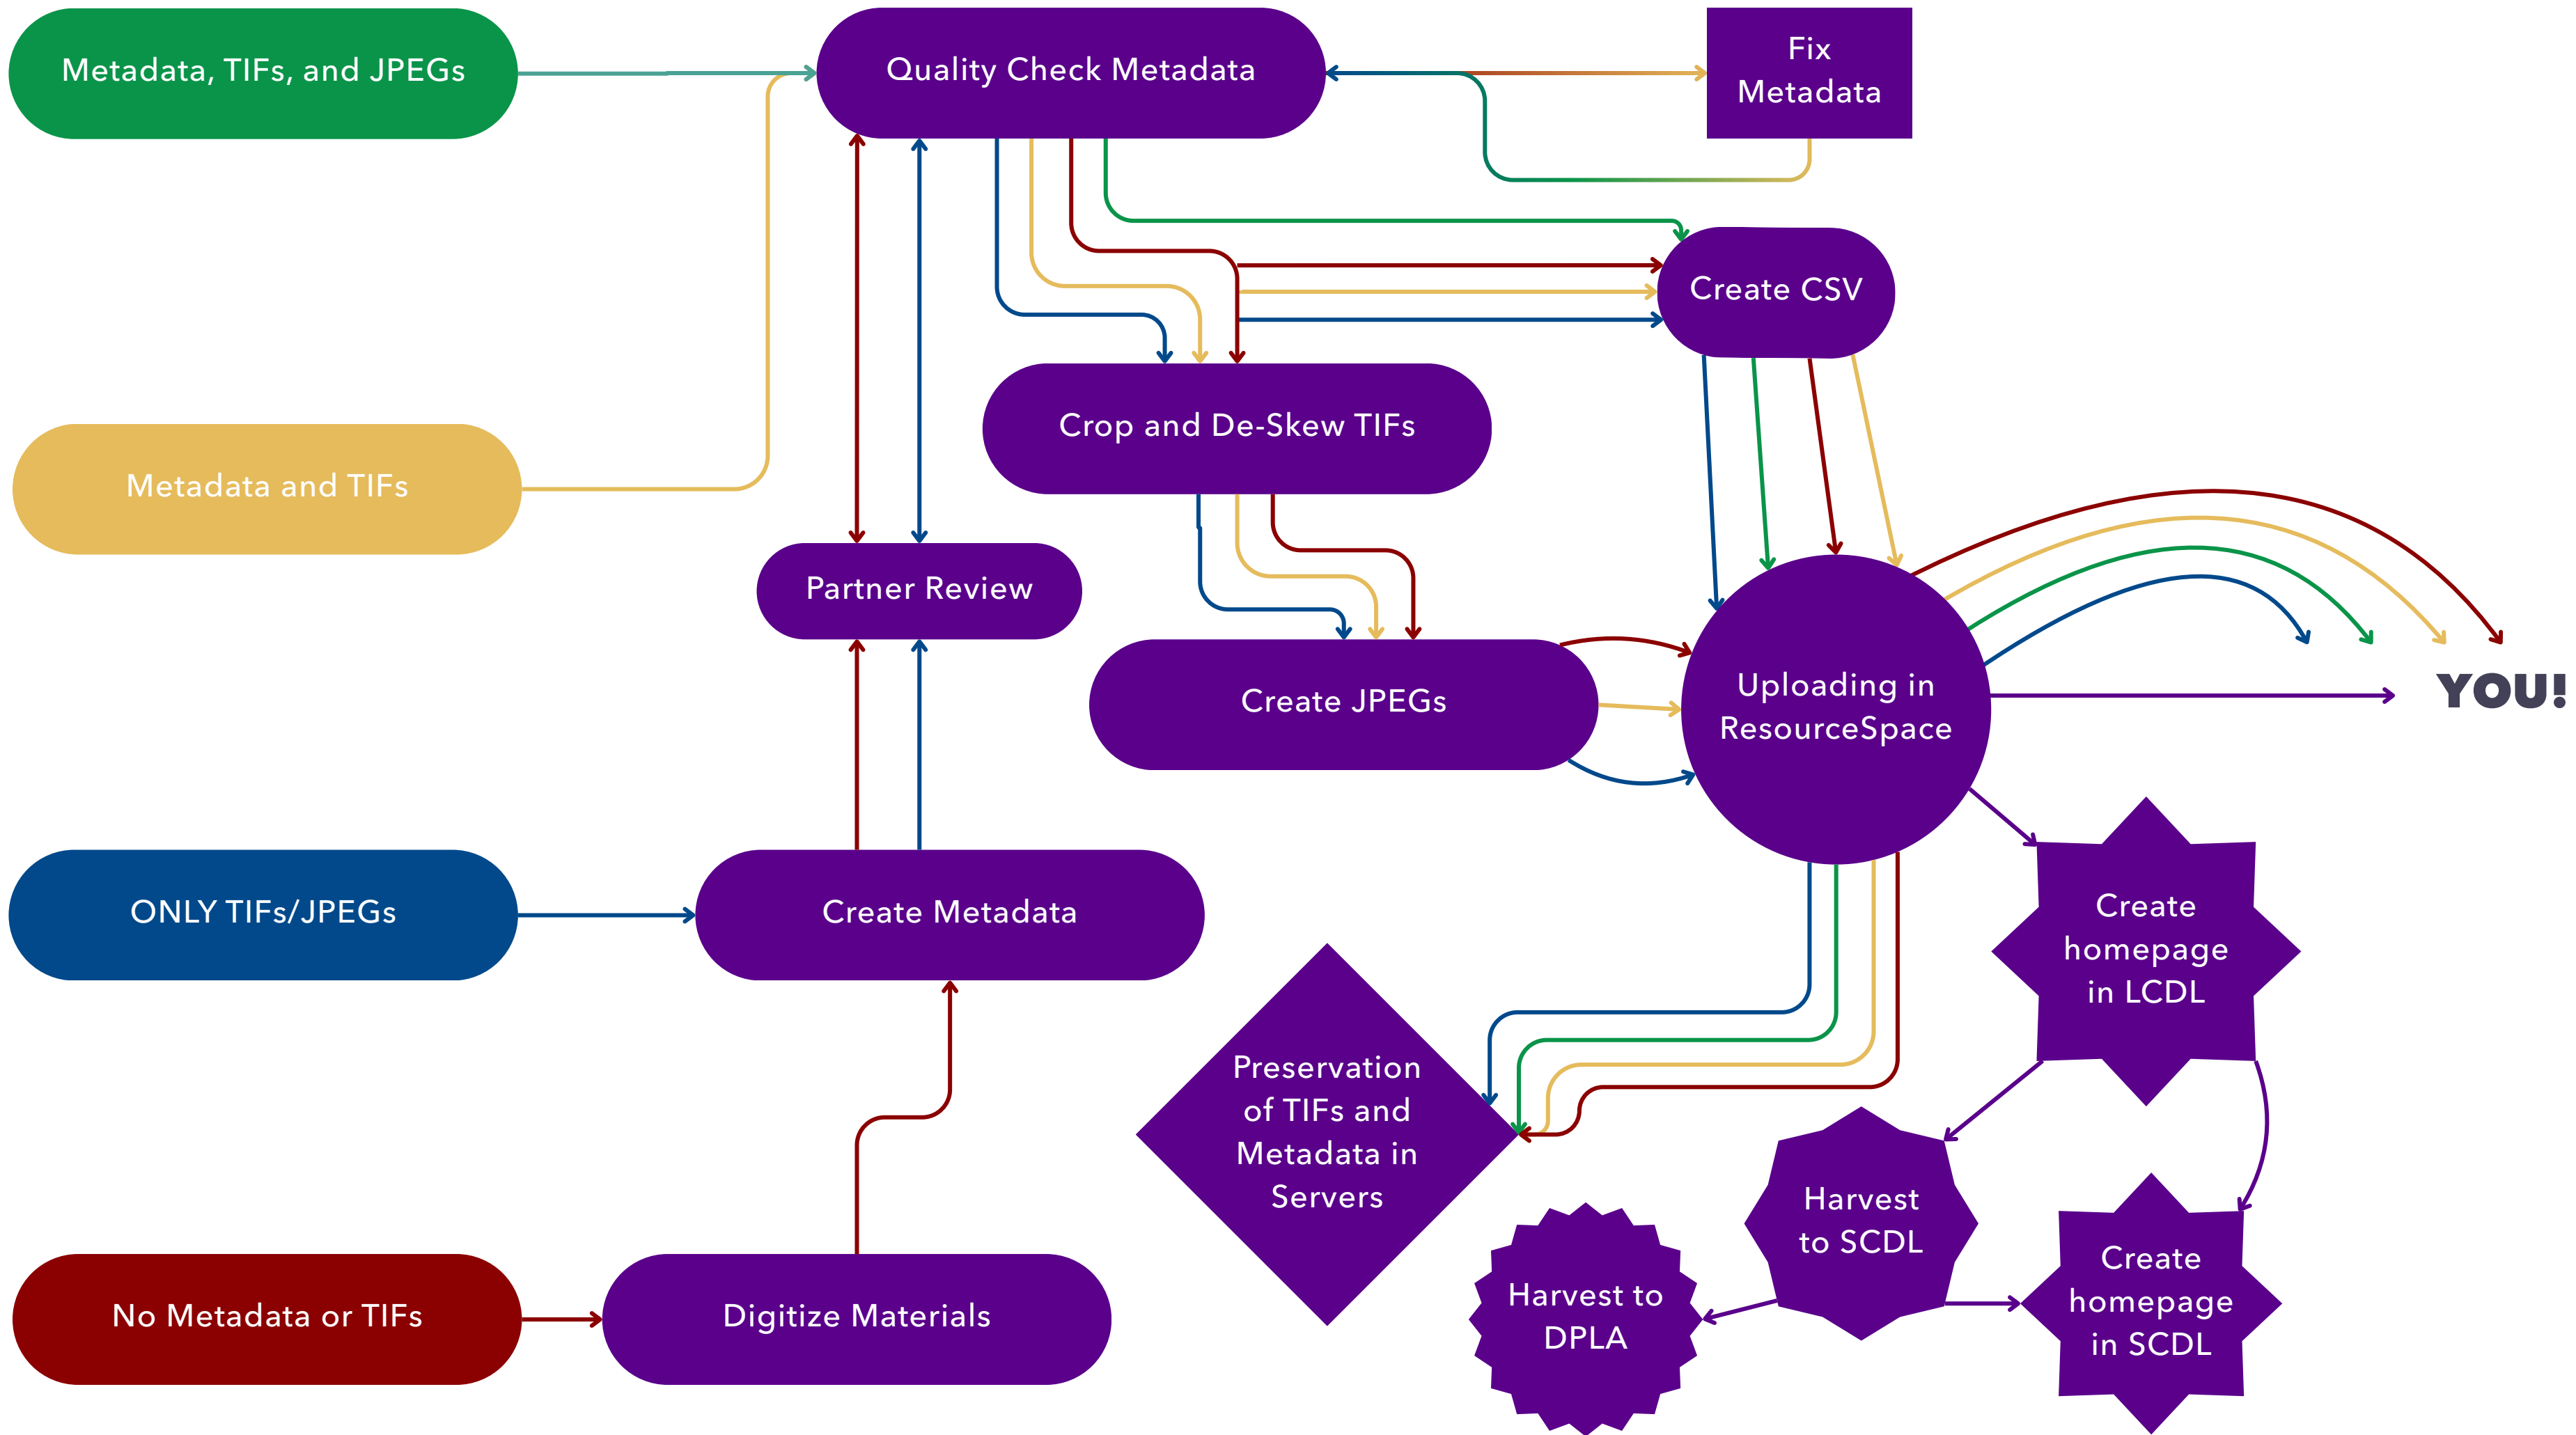

Our workflows may change based on materials we receive from partner organizations. Collection materials used in processing include metadata, TIFs, and JPEGs.

All workflows are contingent on the training we provide to partners to make this happen!

YOU!

DIGITIZATION

LCDL Standards for Digitization

LCDL provides digitization services, using either a flat-bed scanner or our large-format, overhead scanner depending on the type of material.

Our flat-bed scanner is typically used for letter-sized and small materials that can be laid flat.

Our overhead scanner can accommodate bound materials (books, ledgers, etc.) and large/oversize items.

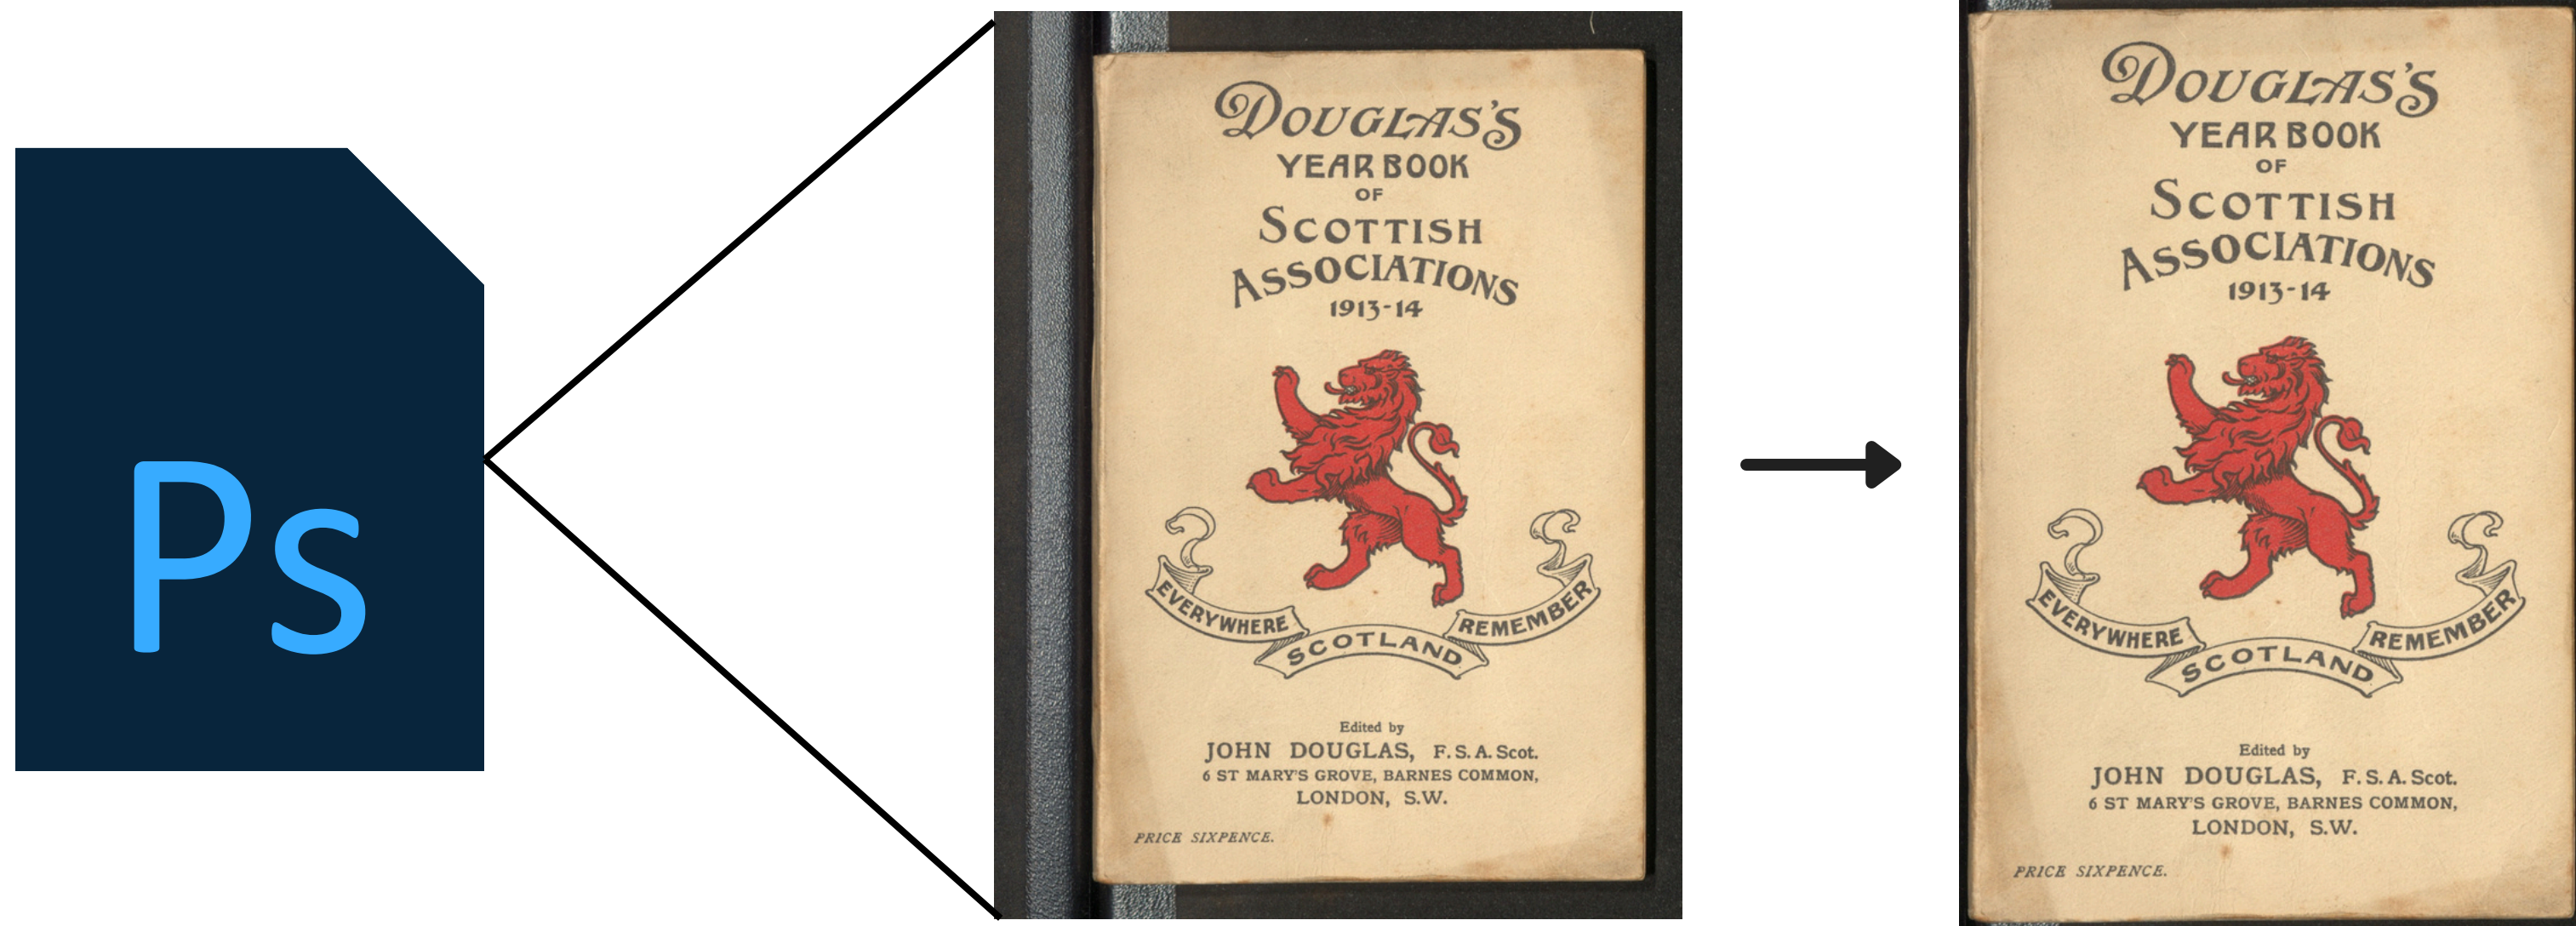

.TIF

DIGITIZATION

LCDL Standards for Digitization

After scans are completed, images are checked thoroughly. Images needing treatment will be cropped and de-skewed according to LCDL standards.

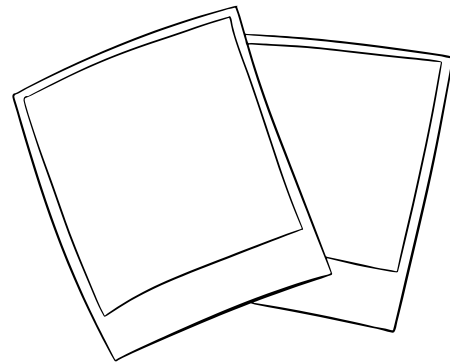

DESCRIPTION

LCDL Standards for Metadata

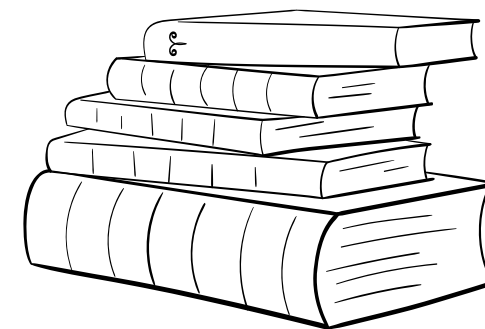

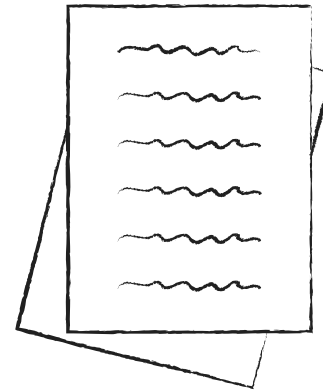

LCDL's metadata uses the MODS schema. We follow national standards for metadata in addition to self-created standards. These standards help us maintain a catalog that is easily searchable by patrons.

Every metadata spreadsheet is reviewed for quality and adherence to LCDL standards. Different object types will have different fields that need to be completed and reviewed. There are three main types of object that we put online:

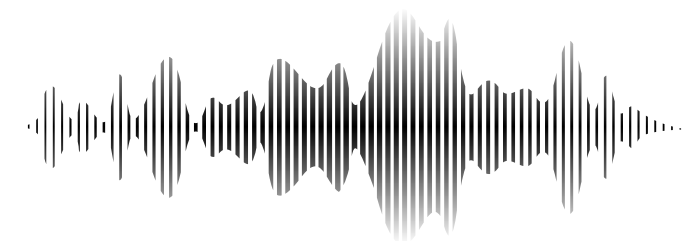

Single and Multi-Image Objects

Compound Objects

Oral Histories

DESCRIPTION

LCDL Standards for Metadata

Our workflow always necessitates a quality check of metadata before being uploaded, regardless if it was created by us or not. When reviewing metadata, the entire spreadsheet is checked based on our standards. Anything that appears in the metadata isn't corrected at this stage will impact the end-product. After reviewing metadata, we will further prepare materials by filling out items in the "administrative column."

Required Fields

- Title
- Collection Title
- Contributing Institution
- Type
- Format
- Media Type
- Digitization Specifications
- Date Digital
- Copyright Status Statement
- Access Note
- Original Filename
- iiiF*
- Collection Identifier*

Non-required Fields

- Creator Name (Personal/Corporate)
- Date
- Subject - Topical
- Subject - Name
- Subject - Geographic
- Subject - Geographic County
- Description
- Language
- Resource Locator
- Access Statement
- Transcript

Object-specific Fields

ORAL HISTORY

- Interviewer
- Interviewee
- File Name - Audio/Video
- Thumbnail File
- Series Title
- Streaming URL*

COMPOUND

- Compound Identifier*
- Page Order*
- resource_type*

* are administrative-only fields!

PUBLICATION

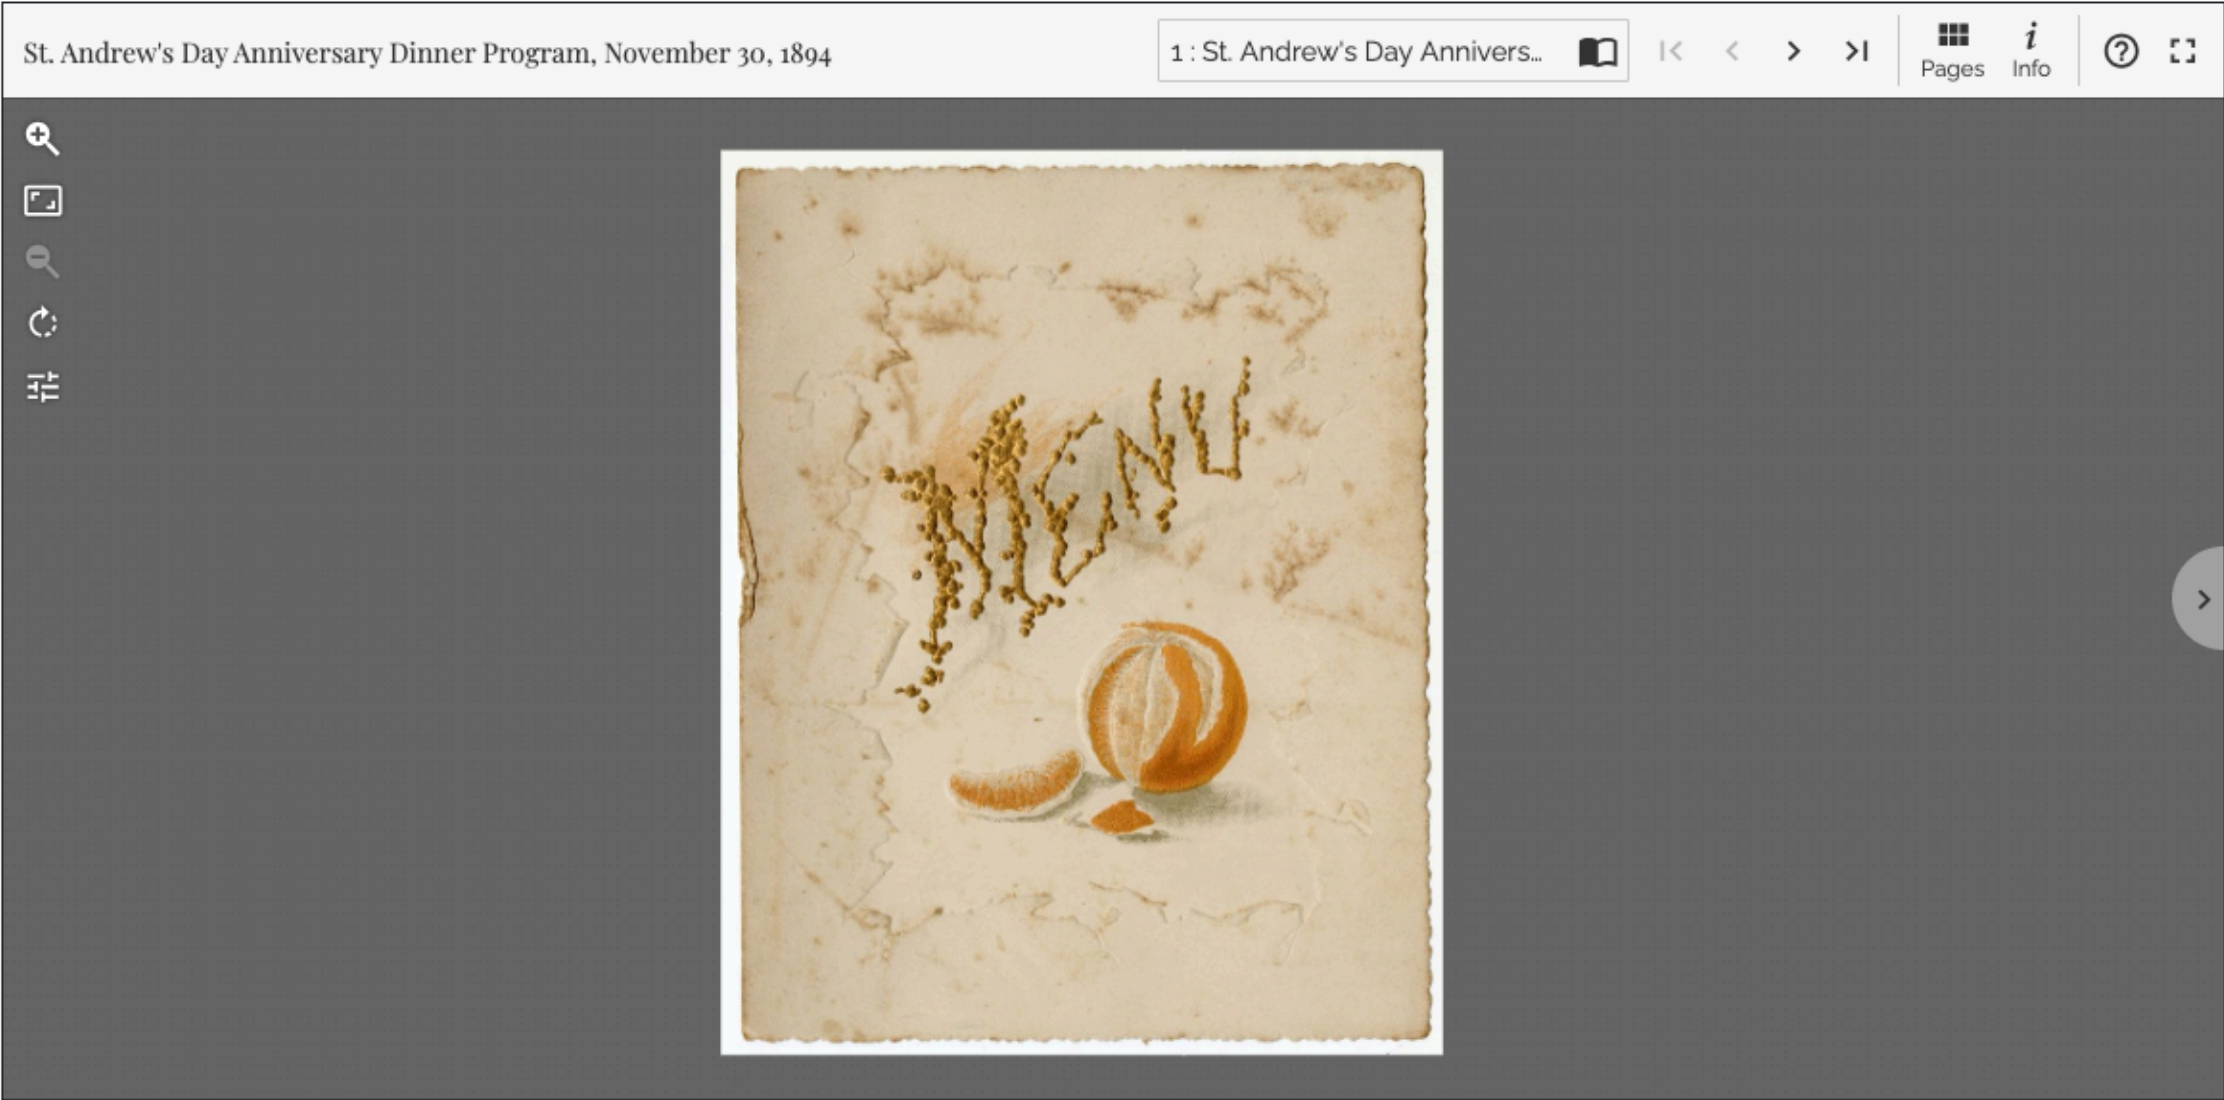

LCDL Standards for Uploading, Publication, and Visibility of Materials

After the object(s) have been sufficiently digitized and processed and the metadata is checked for quality, we prepare the material for upload. The metadata spreadsheet is turned into a CSV file, and any scans are turned into JPEGs.

Both the CSV and JPEGs are uploaded into ResourceSpace.

After they're indexed, each field gets transformed into what you see on our catalog!

Title	Collection Title	Date	...
~~	~~~~ ~~~~~ ~	~~~	~~~

Title:	<u>St. Andrew's Day Anniversary Dinner Program, November 30, 1894</u>
Date:	<u>1894</u>
Creator (Corporate):	St. Andrew's Society of Charleston, South Carolina
Description:	Program for the St. Andrew's Day anniversary dinner, including a menu and toasts. The program contains handwritten notes in pencil correcting and annotating the program. The front page is embossed.
Collection Title:	<u>St. Andrew's Society of Charleston Records, 1729-2001</u>

PUBLICATION

LCDL Standards for Uploading, Publication, and Visibility of Materials

Once everything is online in the catalog, we then create the homepages in LCDL and SCDL. We link all materials to the catalog, as well as include pertinent collection information to enhance discoverability.

About the Collection

The St. Andrew's Society is a social and benevolent organization founded in 1729 in Charleston, South Carolina. Named after the patron saint of Scotland, it is the oldest organization of its type and the progenitor for many other St. Andrews Societies in North and South America, Europe, and Asia. Established to "do generous and charitable actions... and [to] promote some public good," the organization initially provided assistance through monetary handouts to the poor and disadvantaged of Charleston. Today the organization provides regular funding to various local charities and educational institutions each year.

This collection includes administrative, financial, and membership records, records of charitable assistance, and other materials of the St. Andrew's Society of Charleston. Records document the social and benevolent activities of the St. Andrew's Society between the years 1729 to 2001. Additional material in this collection will be digitized over time.

PRESERVATION

LCDL Standards for Image Storage and Preservation

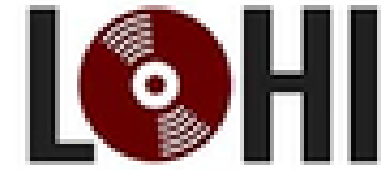

After materials are sufficiently processed and published, we will store the TIFs and CSV file in our server. This allows us to properly preserve the material in formats that resist data loss. Partners still own their own materials and can submit image requests at any time for the original archival masters kept on our server.

This also allows us to keep a copy of the original material, in case of technical troubleshooting.

Servers are expensive to get and maintain. We assist our partner institutions with preserving copies of their historic material without them having to worry about cost or upkeep.

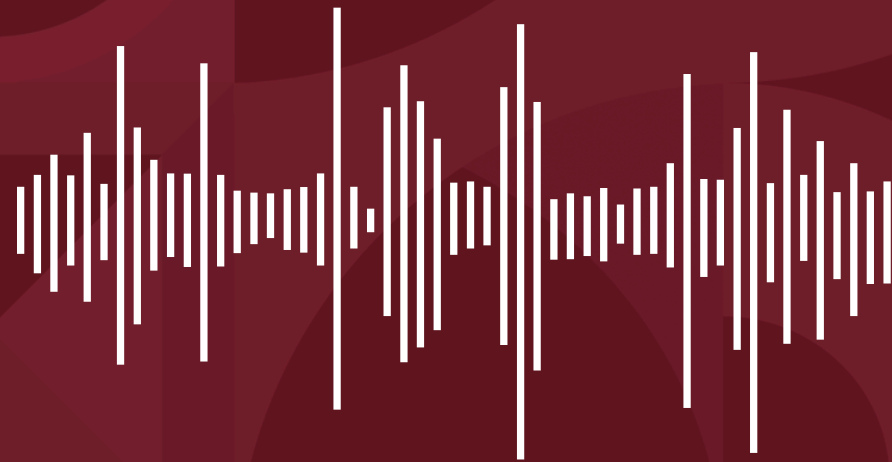

SNEAK PEAK FOR

Lowcountry Oral History Initiative

LCDL Standards for Oral Histories

Currently in development: a new workflow to upload legacy transcripts into Aviary. Using an alignment algorithm to match the transcript with the audio file, we then can upload that into Aviary and review before it's available online.
